

Figure S1

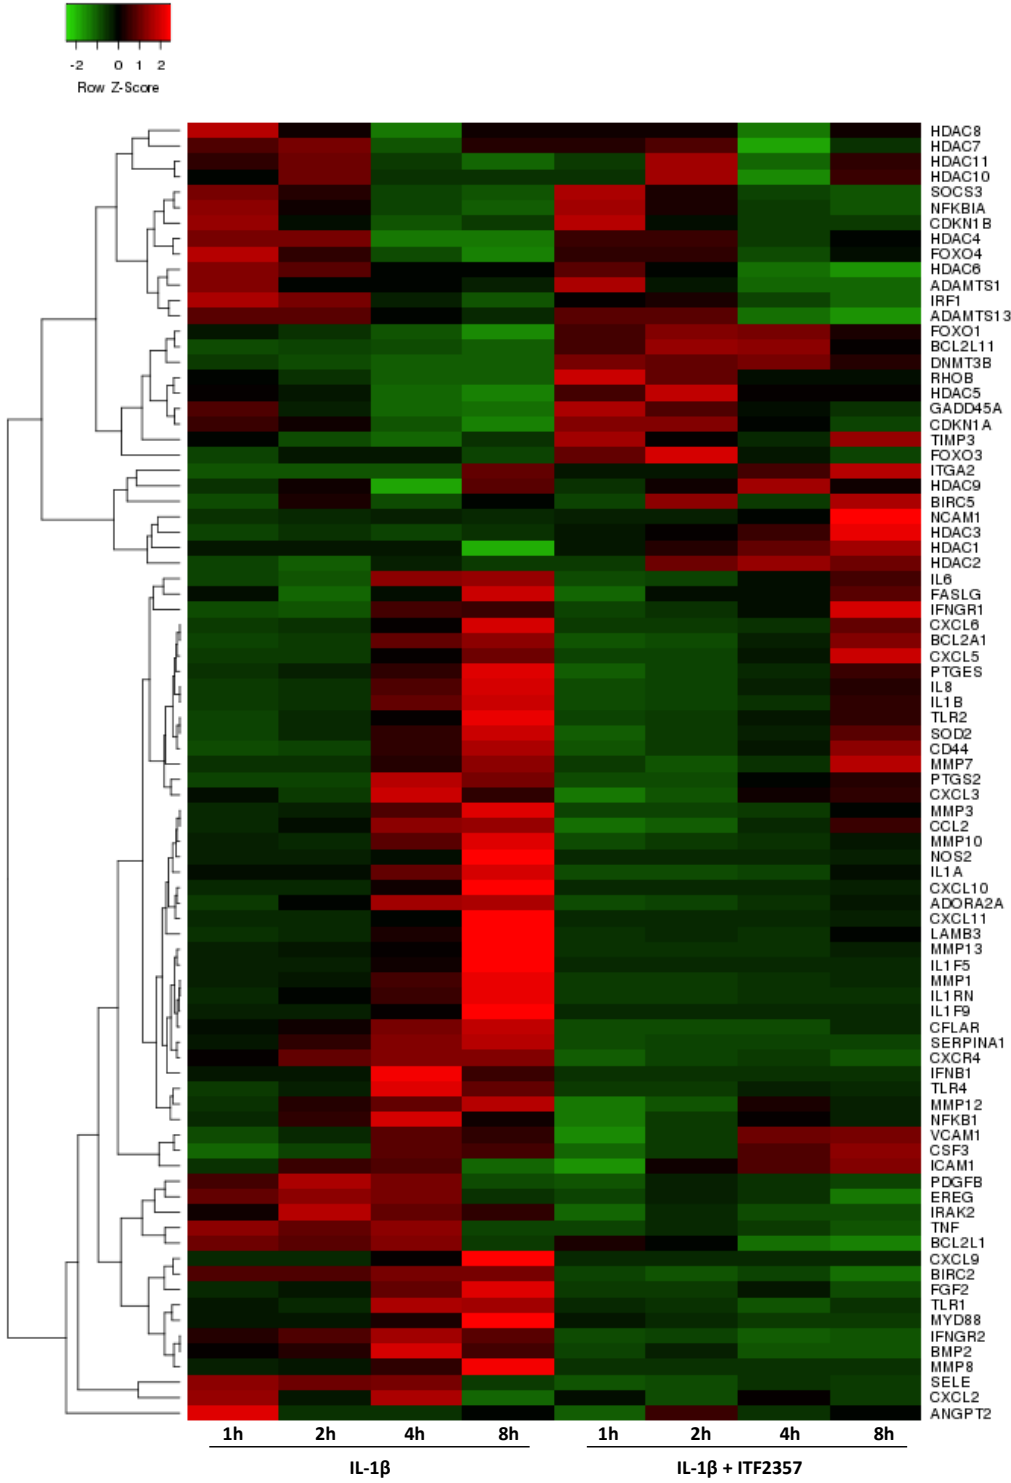

Figure S1. Kinetics of mRNA regulation by ITF2357. RA FLS were either left untreated or were treated with ITF2357 prior to incubation with IL-1 β for the indicated time. Temporal changes in mRNA accumulation of IL-1 β -inducible genes were monitored using a customized qPCR array. Data are presented as Z-scores of mean (n=3) fold changes relative to unstimulated cells and hierarchically clustered with the average linkage method.
