

Additional file 4: Table S4. Sample size calculation based on the observed mean decline (Mean Decl.) in the FTLD-CDR score within one year. Percent values indicate a reduction of cognitive decline, the required number of cases per group (N p Group) correspond to verum and placebo. The power was set to 80%, the alpha error level to 5% for the use of a unpaired t-Test. nfvPPA (N=15), svPPA (N=11), lvPPA (N=9)
