

A**B****C****D****E****F**

Additional file 9: Bland-Altman plots suggest systematic variations between two independent two-step immunoassay experiments. The relative differences between two experiments in the measured levels of A) A β 38, B) A β 40, C) A β 42 and the ratios D) A β 42/A β 40, E) A β 42/A β 38 and F) A β 38/A β 40 were plotted against the respective averages.
