e-Figure 1. Linear relationship between cardiac output and heart rate

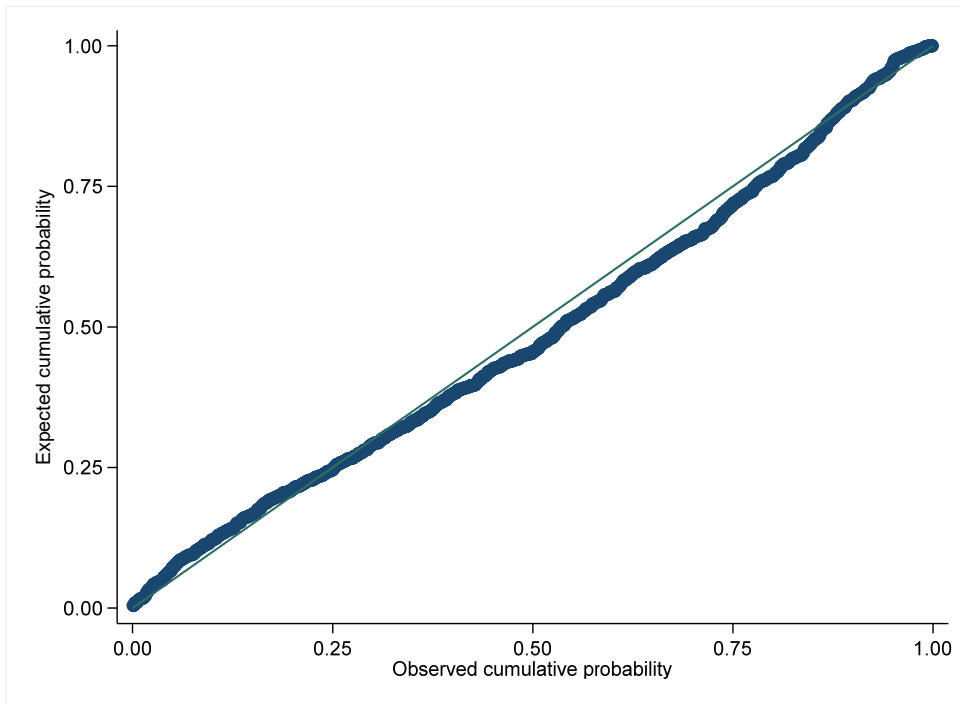

e-Figure 2. Kernel plot of standardized residuals

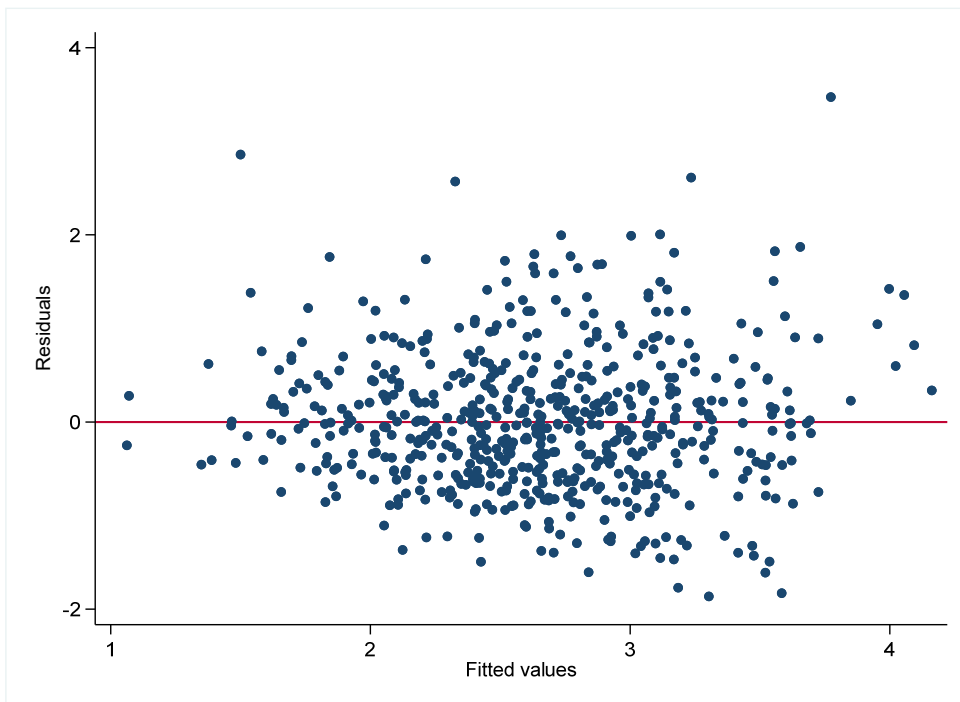

Comment: the Kernel density estimate of the multivariable regression model closely follows the distribution of a normal density plot

e-Figure 3. Probability P-P Plot of the residuals

Comment: there is some deviation in the center of the plot, but we still assume normality as there are no drastic deviations from the diagonal (normality) line.

e-Figure 4. Scatterplot of the residuals

Comment: the scatterplot of the residuals shows no clear pattern to the residuals plotted against the fitted values. Therefore, we assume homoscedasticity of the residuals.
