Figure S1: **Prevalence of CVRFs strongly correlates with BMI in ERAPSO participants.**

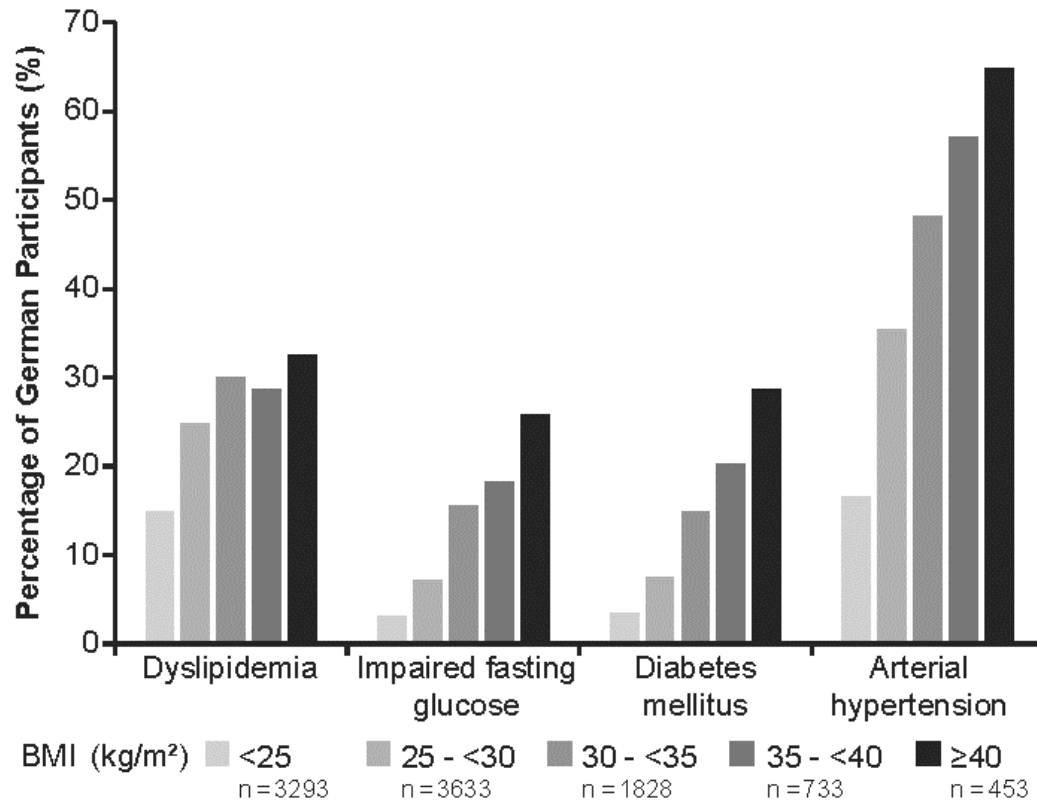

Figure S1 shows the percentage of participants according to BMI subgroups being diagnosed with CVRFs. Increasing prevalence of CVRFs was observed with growing BMI. Total N = 9 904, number of participants n per subgroup shown above. Abbreviations: CVRF = cardiovascular risk factor, BMI = Body Mass Index.

Figure S2: **Prevalence of CVEs strongly correlates with BMI in ERAPSO participants.**

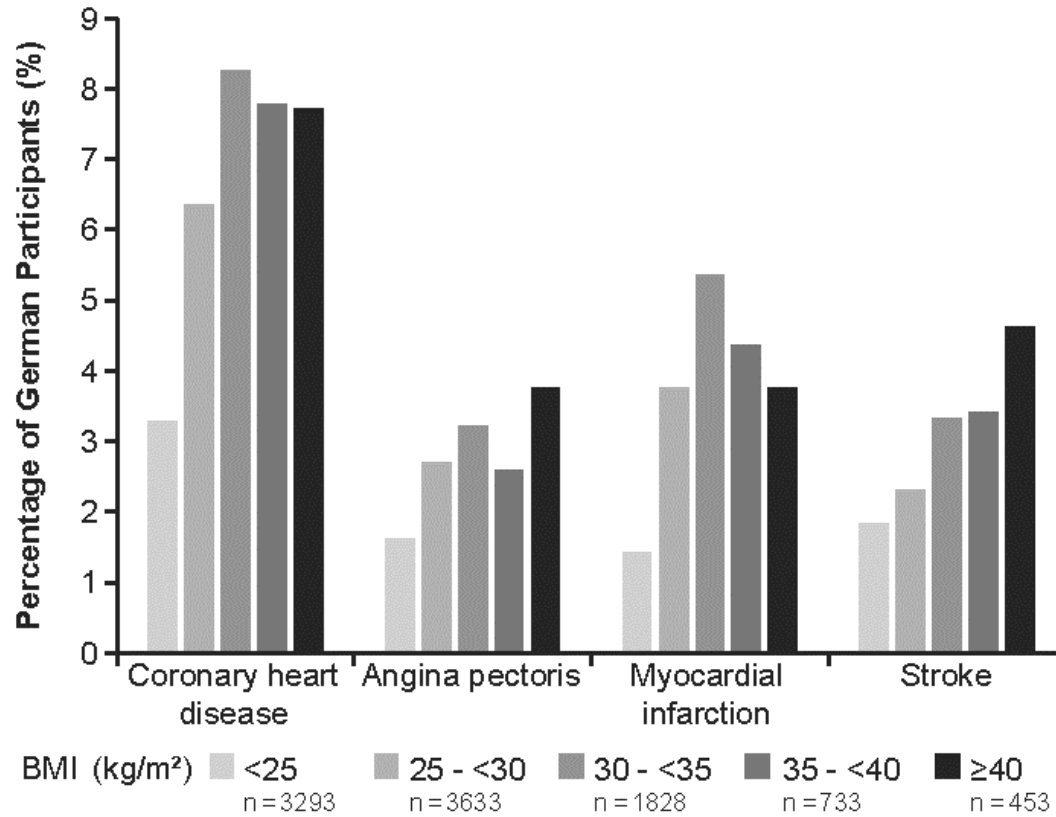

Figure S2 shows the percentage of participants according to BMI subgroups with a history of CVEs. Higher prevalence of cardiovascular risk factors with increased BMI translated into increased incidence of cardiovascular events. Total N = 9 904, number of participants n per subgroup shown above. Abbreviations: CVE = cardiovascular event, BMI = Body Mass Index.
