Supplementary Table S1: Part of the Clinical Characteristics of the IH Cases

Characteristics	n (%)
Female to male ratio	2.17:1
Localization	
Trunk	362(35.04%)
Face	280(27.11%)
Extremities	263(25.46%)
Head and neck	175(16.94%)
Perineum	51(4.94%)
Description	
Superficial	738(71.44%)
Fixed	220(21.30%)
Deep	46(4.45%)
Morphological subtype	
Focal	857(82.96%)
Multifocal	61(5.91%)
Indeterminate	64(6.20%)
Segmental	59(5.71%)
Complications	
Disfigurement	235(22.75%)
Ulceration	41(3.97%)
Visual impairment	8(0.77%)
Heart failure	3(0.29%)
