RefID:7262. Miles, Maureen, Francis, Karen, and Chapman, Ysanne. Challenges for midwives: pregnant women and illicit drug use. *Australian Journal of Advanced Nursing* 2010. 28 (1); The purpose of the paper is to introduce illicit drug use as a societal problem and describes the response of the Australian Government. Specifically the paper examines the use of illicit drugs by pregnant women and the role of midwives in supporting these women throughout pregnancy and birth

; Setting

; Maternity services, specifically antenatal care clinics

; Conclusion

; In Australia the rate of pregnant women who use illicit drugs is escalating. These pregnancies

are high obstetric risk with potential for harm to both the mother and the baby. Pregnancy however is seen as 'window of opportunity'; a time to provide education, choices and support. The literature describes that for health professionals working with pregnant women who are illicit drug users is challenging and for some health professionals their interaction can be negative. Australia advocates harm minimisation and encourages harm reduction strategies. Midwives are in a position to implement these strategies within the maternity setting. Further research is recommended as well as professional development programs for midwives to upgrade knowledge and cultivate engagement skills to enable appropriate and positive interaction with pregnant women who use illicit drugs

RefID:8961. Tayar, S. G.. Description of a substance abuse relapse prevention programme conducted by occupational therapy and psychology graduate students in a United States women's prison. *British Journal of Occupational Therapy* 2004. 67 (4); The psychology students taught the inmates the theoretical bases for the programme, trigger identification and coping skills, social support development and assertive communication. The occupational therapy students used activities to help the inmates to identify their values and interests, develop ideas and resources for leisure and jobs, structure and manage their time, practise assertiveness and identify strengths. Although programme effectiveness was not formally measured, it appeared to both the students and the faculty members that the inmates experienced personal growth and that the student therapists gained professional skills in working with another discipline and
