**Supplementary Fig. 1** Percentage change of density and microarchitectural parameters pre-BCT between sectors and cross-sectional measurements for all participants (n = 90). Sectors left blank were not significantly different from the entire cross section. A, Anterior; L, Lateral; M, Medial; P, Posterior.

**Supplementary Fig. 2** Percentage change of density and microarchitectural parameters post-BCT between sectors and cross-sectional measurements for all participants (n = 90). Sectors left blank were not significantly different from the cross section. A, Anterior; L, Lateral; M, Medial; P, Posterior.
