

Supplementary figure S1 Cytokines producing by CD4⁺ T cells B6 mice were inoculated s.c. with 1×10^7 FBL-3 cells. At different time points ptc lymphocytes from lymph nodes were isolated and investigated. Representative dot plots of cytokine producing CD4⁺CD154⁺ at day 6 ptc in lymph nodes are shown.

Supplementary figure S2 Granzyme B producing Tregs in lymph nodes B6 mice were inoculated s.c. with 1×10^7 FBL-3 cells on day 0. Representative FACS analysis of GzmB and Helios expression by Foxp3⁺CD4⁺ T cells in lymph nodes at day 6 post tumor inoculation is shown.

Supplementary figure S3 Expression of MHC class II molecules on FBL-3 cells
 Representative dot plots on MHC class II expression on FBL-3 cells. (a) Staining of FBL-3 cells from *in vitro* cell cultures (in RPMI medium). (b) FBL-3 cells taken directly *ex vivo* from the tumor of CD45.1 tumor-bearing mice. CD45.1 mice were challenged s.c. with 1×10^7 FBL-3 cells on day 0. On day 4 ptc mice were sacrificed and tumors were extracted. Expression of MHC class II molecule on the CD45.1 negative cell population (FBL-3 cells) was determined.
