Additional information on individual treatment response, study design and ethical consideration in the STICLO studies.

Figure S1 - Overall study design

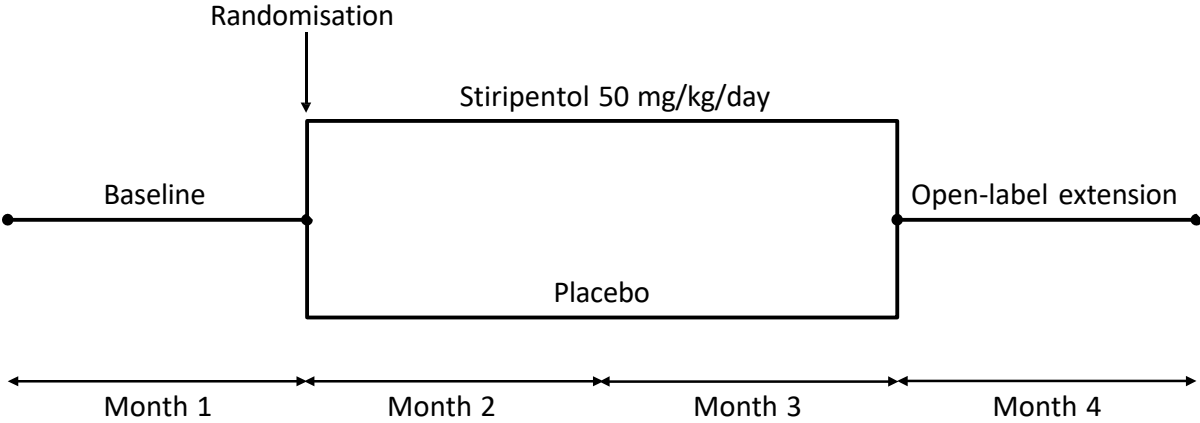

Figure S2 – Individual Change in the number of seizures from baseline

Change in seizure frequency is represented by a waterfall chart where patients are ordered by the magnitude of the change between baseline and 1st month under treatment or 2nd month under treatment or open-label period. All frequencies are adjusted for a 30-day period to be comparable.

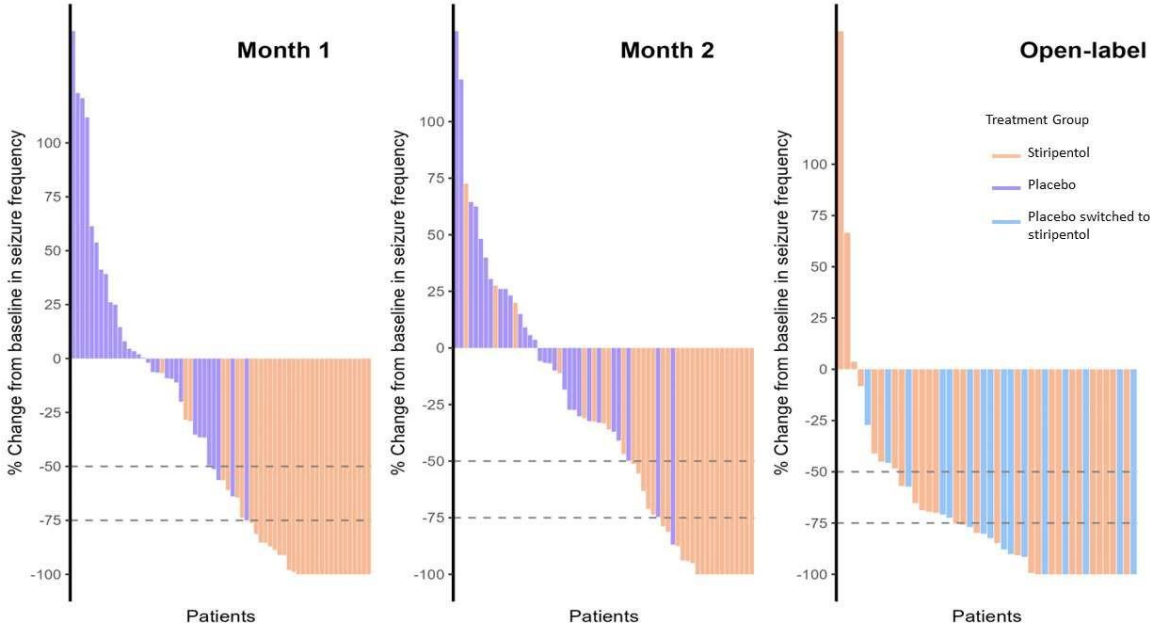

Figure S3 - Individual treatment response over time

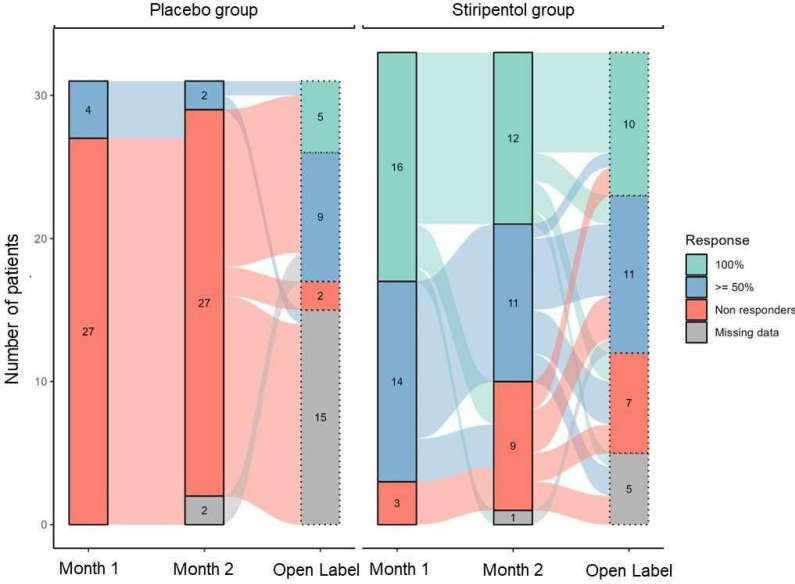

Table S1 - List of Italian Ethics Committees

Principal investigator

Dr Renzo GUERRINI
Istituto di Neuropsichiatria Infantile
Università di Pisa – IRCCS Stella Maris
Via dei Giacinti, 2
56018 CALAMBRONE (PISA), Italy

Ethics Committee
