

Additional file 2 Additional MRI data

A-B. MRI study-specific template (coronal and transverse) with an overlay representing ROI volume differences at 10 months of age (A) between Q331K-*Sarm1*^{+/-} and NTG mice (B) between Q331K-*Sarm1*^{-/-} and Q331K-*Sarm1*^{+/-} mice. The colour of the overlay indicates the inter-group volume difference, while the transparency indicates the statistical significance. ROIs in which FWE-corrected p value <0.05 are contoured in black
