

Supplementary Table 2

Magnitude (mm) of labial gingival recession for the teeth 17-47 before Tx (T0) in all included study casts for groups "complete" (CP, n=94) and "incomplete" (INCP, n=79). The mean value and standard deviation as well as the median, minimum and maximum values are given. In addition, the p-value of the statistical comparison ("incomplete" vs. "complete") is given for each type of tooth.
